

Some Additional Review Problems from the Textbook

This is not an exhaustive list of all possible type of problems.
 Answers and solutions to odd exercises are in the book and Student Solutions Manual, respectively.
 (For more problems, see your class notes, examples in the book and homework problems.)

The point value of each problem is in the left-hand margin. You must show your work to receive any credit, except on problem 1. Work neatly.

(12) 1. True or False.

() (a) The differential of $y = x \sin x - 1$ is $dy = x \cos x$.

() (b) $\int_0^2 f(x) dx \leq 2$ if the continuous function $f(x) \leq x$ for $0 \leq x \leq 2$.

() (c) $\int_a^b f(x) dx = f(b) - f(a)$, for every continuous function f .

() (d) The most general antiderivative of the function $f(x) = x^2$ is $F(x) = x^3 + c$.

() (e) $\frac{d}{dx} \int_{-1}^x 2t dt = \frac{2}{x}$.

() (f) Suppose continuous function f has one critical point $x = c$ on its domain with $f'(x) < 0$ for $x < c$ and $f'(x) > 0$ for $x > c$, then $f(c)$ is the absolute maximum value of the function f .

(8) 2. Find the solution of the equation $x^5 + x - 1 = 0$ correct to four decimal places.

¹If you exceed the time limit, you will receive a score of zero.

- (12) 3. The U.S. Postal Service will accept a box for domestic shipment only if the sum of its length and girth (distance) around does not exceed 108 inches. What dimensions will give a box with a square end the largest possible volume?

- (8) 4. The acceleration of a moving object at time t is given by $a(t) = 6 - 2t$ ft/sec². Suppose the initial velocity and position of this object are $v(0) = 0$ ft/sec and $s(0) = 94$ ft, respectively. Find this object's position at any time t .

(10) 5. Evaluate $\int_0^4 (x + 1) dx$ using the (limit) definition of the integrals.

(5) 6. Evaluate $\int_{-2}^0 \sqrt{4 - x^2} dx$, by considering the area of the region it represents and using the appropriate area formula.

(5) 7. Find the derivative $\frac{d}{dx} \left(\int_0^{\sin x} \sqrt{1 + t^2} dt \right)$.

(30) 8. Evaluate the following integrals.

(a) $\int (3\sqrt{x} - 5 \csc x \cot x) dx$

(a) $\int \frac{t}{(t^2 + 1)^3} dt$

(b) $\int_1^2 \left(z - \frac{1}{z}\right)^2 dz$

(c) $\int_5^{-2} [3f(x) + 1] dx$, if $\int_0^5 f(x) dx = 10$ and $\int_0^{-2} f(x) dx = -4$

8. (Continued)

(d) $\int \sin^2 \theta d\theta$

(e) $\int x \sqrt{x-1} dx$

(10) 9. Find the area of the region enclosed by the curves $y = x^2$ and $y = -x + 2$.
