

### Review Problems (from the Textbook)

This is not an exhaustive list of all possible type of problems.  
Answers and solutions to odd exercises are in the book and Student Solutions Manual, respectively.

**Your exam preparations should include review of lecture notes, homework, and solving these review problems.** After review, use the sample exam as a test of readiness. If you can not confidently, independently and quickly solve the sample exam problems correctly, you will not do well on the exam.

The point value of each problem is in the left-hand margin. You must show your work to receive any credit, except in problem 1. Work neatly.

(4) 1. True or False.

(        ) (a) The sequence  $a_n = (-1)^n$  converges.

(        ) (b) The pressure on a thin horizontal plate  $d$  meters below the surface of a liquid with weight density  $\delta$  Newtons per cubic meter is  $P = \delta d$ .

(        ) (c)  $\sum_{n=1}^{\infty} 3(0.4)^{n-1} = 5$ .

(        ) (d) If  $\lim_{n \rightarrow \infty} a_n = 1$ , then the series  $\sum_{n=1}^{\infty} a_n$  converges.

(8) 2. Find the length of the curve  $y = \ln(x^2 - 1)$ ,  $2 \leq x \leq 5$ . **State the formula used.**

(6) 3. Write a definite integral (or a sum of definite integrals) which upon evaluation you will get the area of the surface generated by revolving the curve  $y = \sin x$ ,  $0 \leq x \leq \frac{\pi}{2}$ , about the  $x$ -axis. Do not evaluate it.

(6) 4. A pool has a square vertical glass light cover of width 1 foot. If the bottom of this plate is 5 feet under the water, Find the force against the glass light cover.

(6) 5. Consider the sequence  $\left\{ \frac{5n}{n^2 + 1} \right\}_{n=2}^{\infty}$ .

(a) Find, with proof, both a lower bound value and an upper bound value of the sequence.

(b) Show, with proof, that this sequence is monotone.

- (14) 6. Determine convergence or divergence of the following series. State the tests used and show your work.

(a) 
$$\sum_{n=2}^{\infty} \left( \frac{1}{n} \times \frac{1}{\ln n} \right)$$

(b) 
$$\sum_{n=1}^{\infty} \frac{2^n - n}{2^n(n^2)}$$

- (6) 7. Find the sum of the series  $\sum_{k=1}^{\infty} \frac{1}{(2k-1)(2k+1)}$ .
